Application to Financial Statistics

Background

Why do we need a **forecasting model** in **Financial Statistics**?

- ▶ **Financial Statistics** is part of the **Federal Government Expert Group on Business Cycles**

Background

Why do we need a **forecasting model** in **Financial Statistics**?

- ▶ **Financial Statistics** is part of the **Federal Government Expert Group on Business Cycles**
- ▶ **Quarterly forecast** for annual nominal **general government consumption**

Background

Why do we need a **forecasting model** in **Financial Statistics**?

- ▶ **Financial Statistics** is part of the **Federal Government Expert Group on Business Cycles**
- ▶ **Quarterly forecast** for annual nominal **general government consumption**
- ▶ $GDP = C + I + G + NX$

Background

Why do we need a **forecasting model** in **Financial Statistics**?

- ▶ **Financial Statistics** is part of the **Federal Government Expert Group on Business Cycles**
- ▶ **Quarterly forecast** for annual nominal **general government consumption**
- ▶ $GDP = C + I + G + NX$
- ▶ **KOMA** provides an ideal framework to...

- ▶ $GDP = C + I + G + NX$
- ▶ **KOMA** provides an ideal framework to...
 - ▶ implement **conditional forecasts** consistent with consensus of the expert group
 - ▶ **extend** our current forecasting models (benchmarking)
 - ▶ model **scenarios** (effect of tariffs, relief measures, etc.)
 - ▶ model **statistical identities**

Background

Why do we need a **forecasting model** in **Financial Statistics**?

- ▶ **Financial Statistics** is part of the **Federal Government Expert Group on Business Cycles**
- ▶ **Quarterly forecast** for annual nominal **general government consumption**
- ▶ $GDP = C + I + G + NX$
- ▶ **KOMA** provides an ideal framework to...
 - ▶ implement **conditional forecasts** consistent with consensus of the expert group
 - ▶ **extend** our current forecasting models (benchmarking)
 - ▶ model **scenarios** (effect of tariffs, relief measures, etc.)
 - ▶ model **statistical identities**
 - ▶ provide forecasts with traceable results

Current Set-Up

- ▶ **KOMA** integrates well in our **data base infrastructure**

Current Set-Up

- ▶ **KOMA** integrates well in our **data base infrastructure**
 - ▶ Database for **quarterly financial statistics**

Current Set-Up

- ▶ **KOMA** integrates well in our **data base infrastructure**
 - ▶ Database for **quarterly financial statistics**
 - ▶ Internal **indicator data base**

Current Set-Up

- ▶ **KOMA** integrates well in our **data base infrastructure**
 - ▶ Database for **quarterly financial statistics**
 - ▶ Internal **indicator data base**
- ▶ Model is **work-in-progress**, but main building blocks include

Current Set-Up

- ▶ **KOMA** integrates well in our **data base infrastructure**
 - ▶ Database for **quarterly financial statistics**
 - ▶ Internal **indicator data base**
- ▶ Model is **work-in-progress**, but main building blocks include
 - ▶ All **GDP subcomponents**

Current Set-Up

- ▶ **KOMA** integrates well in our **data base infrastructure**
 - ▶ Database for **quarterly financial statistics**
 - ▶ Internal **indicator data base**
- ▶ Model is **work-in-progress**, but main building blocks include
 - ▶ All **GDP subcomponents**
 - ▶ Detailed **subcomponents** of government consumption for all **subsectors** (Confederation, Cantons, Municipalities and Social Security Funds)

Current Set-Up

- ▶ **KOMA** integrates well in our **data base infrastructure**
 - ▶ Database for **quarterly financial statistics**
 - ▶ Internal **indicator data base**
- ▶ Model is **work-in-progress**, but main building blocks include
 - ▶ All **GDP subcomponents**
 - ▶ Detailed **subcomponents** of government consumption for all **subsectors** (Confederation, Cantons, Municipalities and Social Security Funds)
 - ▶ $G = P3 = \underbrace{P2}_{\text{Interm. Cons.}} + \underbrace{P51c}_{\text{Cons. of fixed Capital}} - \underbrace{P1}_{\text{Gov. Prod.}} + \underbrace{D632}_{\text{Social transfers}} + \underbrace{D1}_{\text{Comp. of Employees}}$

Examples of Equations used

- ▶ Modelling of **consumption** for every subsector
- ▶ **Sum of subsectors** must equal **general government consumption**
- ▶ **Stochastic equations** for **subcomponents** of consumption
 - ▶ For example, D1 (comp. of employees), indicator for development of compensation used from financial plans and other indicators

```
equations <- c(  
  gdp == ch + cg + inv + imp - exp,  
  cg == (cgb / cg)*cgb + (cgk / cg)*cgk + (cgg / cg)*cgg + (cgsv / cg)*cgsv,  
  cgb == (b2p2/cgb)*b2p2 +(b2p51c/cgb)*b2p51c -(b1p1/cgb)*b1p1 +  
    (b2D632/cgb)*b2D632 +(b2D1/cgb)*2D1,  
  b2D1 ~ b2D1indic + npop_gov + wage_index
```

Examples of Equations used

- ▶ Modelling of **consumption** for every subsector
- ▶ **Sum of subsectors** must equal **general government consumption**
- ▶ **Stochastic equations** for **subcomponents** of consumption
 - ▶ For example, D1 (comp. of employees), indicator for development of compensation used from financial plans and other indicators

```
equations <- c(  
  gdp == ch + cg + inv + imp - exp,  
  cg == (cgb / cg)*cgb + (cgk / cg)*cgk + (cgg / cg)*cgg + (cgsv / cg)*cgsv,  
  cgb == (b2p2/cgb)*b2p2 +(b2p51c/cgb)*b2p51c -(b1p1/cgb)*b1p1 +  
    (b2D632/cgb)*b2D632 +(b2D1/cgb)*2D1,  
  b2D1 ~ b2D1indic + npop_gov + wage_index
```

Examples of Equations used

- ▶ Modelling of **consumption** for every subsector
- ▶ **Sum of subsectors** must equal **general government consumption**
- ▶ **Stochastic equations** for **subcomponents** of consumption
 - ▶ For example, D1 (comp. of employees), indicator for development of compensation used from financial plans and other indicators

```
equations <- c(  
  gdp == ch + cg + inv + imp - exp,  
  cg == (cgb / cg)*cgb + (cgk / cg)*cgk + (cgg / cg)*cgg + (cgsv / cg)*cgsv,  
  cgb == (b2p2/cgb)*b2p2 +(b2p51c/cgb)*b2p51c -(b1p1/cgb)*b1p1 +  
    (b2D632/cgb)*b2D632 +(b2D1/cgb)*2D1,  
  b2D1 ~ b2D1indic + npop_gov + wage_index
```

  cgb == (b2p2/cgb)*b2p2 +(b2p51c/cgb)*b2p51c -(b1p1/cgb)*b1p1 +  
    (b2D632/cgb)*b2D632 +(b2D1/cgb)*2D1,  
  b2D1 ~ b2D1indic + npop_gov + wage_index
```

In what follows: the forecasts are illustrative and based on experimental model specifications, and should not be interpreted as official forecasts

Results - GDP as Benchmark

Appendix to the SECO press release from 18.03.2026¹

Economic forecasts Switzerland

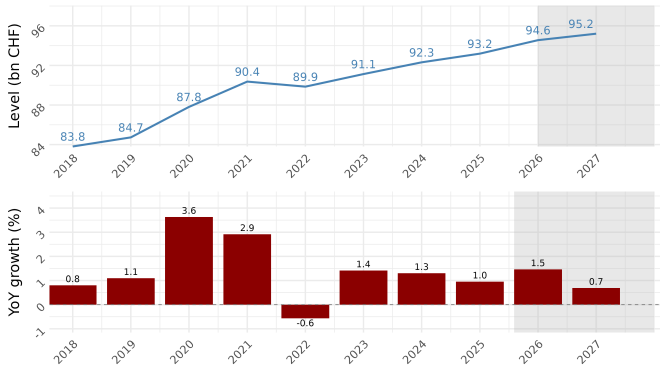

Growth rates in % unless otherwise stated, growth contributions in percentage points, GDP and components: volumes, seasonally adjusted; foreign trade: excluding valuables

	2024	2025	2026 *	2027 *
GDP and components, sport event adjusted¹				
GDP	1.2	1.4	1.0	(1.1) 1.7 (1.7)
Private consumption	2.4	1.5	1.4	(1.5) 1.5 (1.5)
Government consumption	1.3	1.0	1.8	(0.4) 0.6 (0.4)

Results - Real General Government Consumption

Yearly Real General Government Consumption

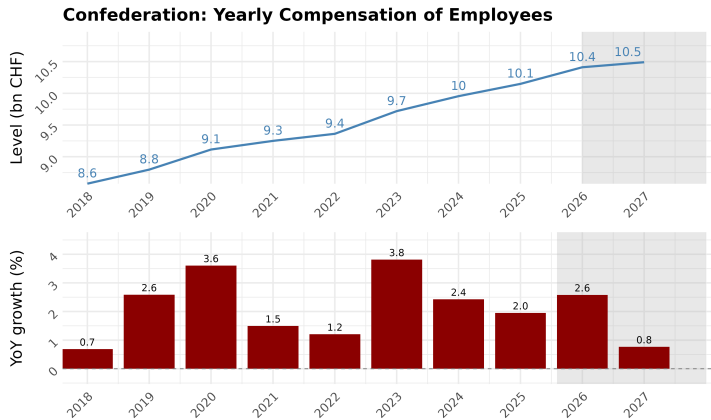

Appendix to the SECO press release from 18.03.2026¹

Economic forecasts Switzerland

Growth rates in % unless otherwise stated, growth contributions in percentage points, GDP and components: volumes, seasonally adjusted; foreign trade: excluding valuables

	2024	2025	2026 *	2027 *
GDP and components, sport event adjusted**				
GDP	1.2	1.4	1.0	(1.1) 1.7
Private consumption	2.4	1.5	1.4	(1.5) 1.5
Government consumption	1.3	1.0	1.8	(0.4) 0.6

Results - Compensation of Employees

Conclusion

- ▶ **Consistent** and **transparent** framework for (government consumption) forecasting

Conclusion

- ▶ **Consistent** and **transparent** framework for (government consumption) forecasting
- ▶ Intuitive **in-sample testing** and model validation

Conclusion

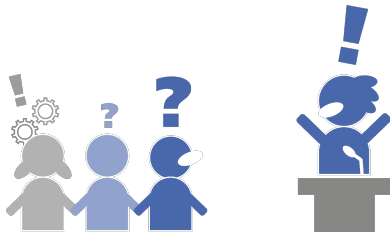

- ▶ **Consistent** and **transparent** framework for (government consumption) forecasting
- ▶ Intuitive **in-sample testing** and model validation
- ▶ Flexible tool for scenarios and **conditional** forecasts

Conclusion

- ▶ **Consistent** and **transparent** framework for (government consumption) forecasting
- ▶ Intuitive **in-sample testing** and model validation
- ▶ Flexible tool for scenarios and **conditional** forecasts
- ▶ Ensures coherence through **economic identities** and model structure
